

Track stack, 1.8x. One time axis, on top; tracks 0.5 mm apart with a 0.25 pt rule hairline in the gap; each group opens with a 2.5 mm header row (5 pt, 500, caps, tracked). Track labels (6 pt, ink) right-align in a label column that grows the left margin; value tracks carry a y axis with two ticks at round numbers, labelled left of the axis within the track's height; events and lanes carry none. A black rule at the start time runs through every track. Colour follows form 17: observed in vermillion, predicted in blue (lines, and probability on the blue ramp), risk on the valence scale. Lengths in mm, real size.
